1. OBJECTIVES OF THE USER GUIDE

The main objective of this EDI User Guide, for the electronic exchange of business documents with Bonpreu, is that it serves to clarify all the aspects involved in each one of the phases that are required to perform the exchanges in an efficient manner.

We consider it important that with this guide; identify all areas of our organization that are involved in the various operational in each time. They should also be clearly identified the areas involved of their organizations, so that the communication flow that occurs is most effective.

If for the first time, you will use the EDI system standard, we believe it appropriate to inform you that this guide contains technical aspects, of communication, EDI message, so that the IT areas of your organizations, they must have essential access to the same.

In the following chapters, you can find information related to the first steps that you should do to make the connection EDI between you and us. You can also find information related to the different documents that we will start to transmit and the content of the same.

1.1. Advantages of using EDI Standard

Currently, the supply chain between manufacturers and dealers requires that the flow of goods is as efficient as possible to avoid breakage of stock on the shelves, as well as expedite the payment of invoices.

To do this, the exchange of business documents, you need a tool to avoid delays. The tool or system of exchange is the standard EDI (Electronic Data Interchange), the use of which effectively allows the reduction of the cycle of the supply chain and the costs that you are incurring along the same.

As general advantages and particulars of the EDI standard in Bonpreu we can mention:

- Use a common language valid for all partners with the messages existing standards.
- Minor incidents in all of the administrative processes due to the non-manipulation of data.
- Cost of transmission is less than the load of data in information systems, compensating and amortised quickly the investment in software.

As a summary, we can say that it is a competitive advantage for any company, whether manufacturer, distributor or logistics operator.

1.2. First steps in the communication. Operational with Bonpreu

Those providers that it is the first time you go to use the System of Electronic Data Interchange it is necessary to know the parties involved in this system and the first steps to enter in this area.

- The Manufacturers, Distributors, dealers, Stores, Dealers and logistics Operators are the users of this system of electronic data interchange.
- Software vendors, who provide and implement programs to be able to make exchanges and to translate the different messages.
- Value-added networks (data transmission) to put their infrastructure in order to produce communication between the different users, and allow for the possible interchange between different networks and in different places.

For more information, you can contact with the EDI services supplier, SERES (902424342) or in his web (<http://es.grouperes.com>).
